

BRCA, HRD and PARPi: Therapies for TNBC

Prof Christian F Singer, MD, MPH
Head, Center for Breast Health
Medical University of Vienna

Prevalence of BRCA Germline Mutations

- Prevalence of BRCA 1 or 2 mutations (USA) : 1 in 300
- Males and females can carry and transmit BRCA mutations to offsprings
- BRCA1 and 2 mutations are more common in ethnic subgroups („founder mutations“)
 - Ashkenazi Population: 1 in 40
 - Icelandic Population: 1 in 170

Somatic vs Germline BRCA 1/2 Mutations

Somatic mutations

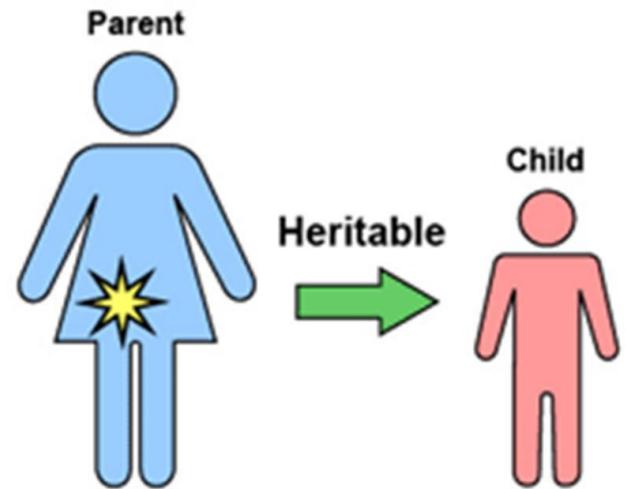

- Occur in *nongermline* tissues
- Cannot be Inherited if the mutation occurs after the germline differentiates

Mutation in tumor only
(for example, breast)

Germline mutations

- Present in egg or sperm
- Can be inherited
- Cause cancer family syndrome

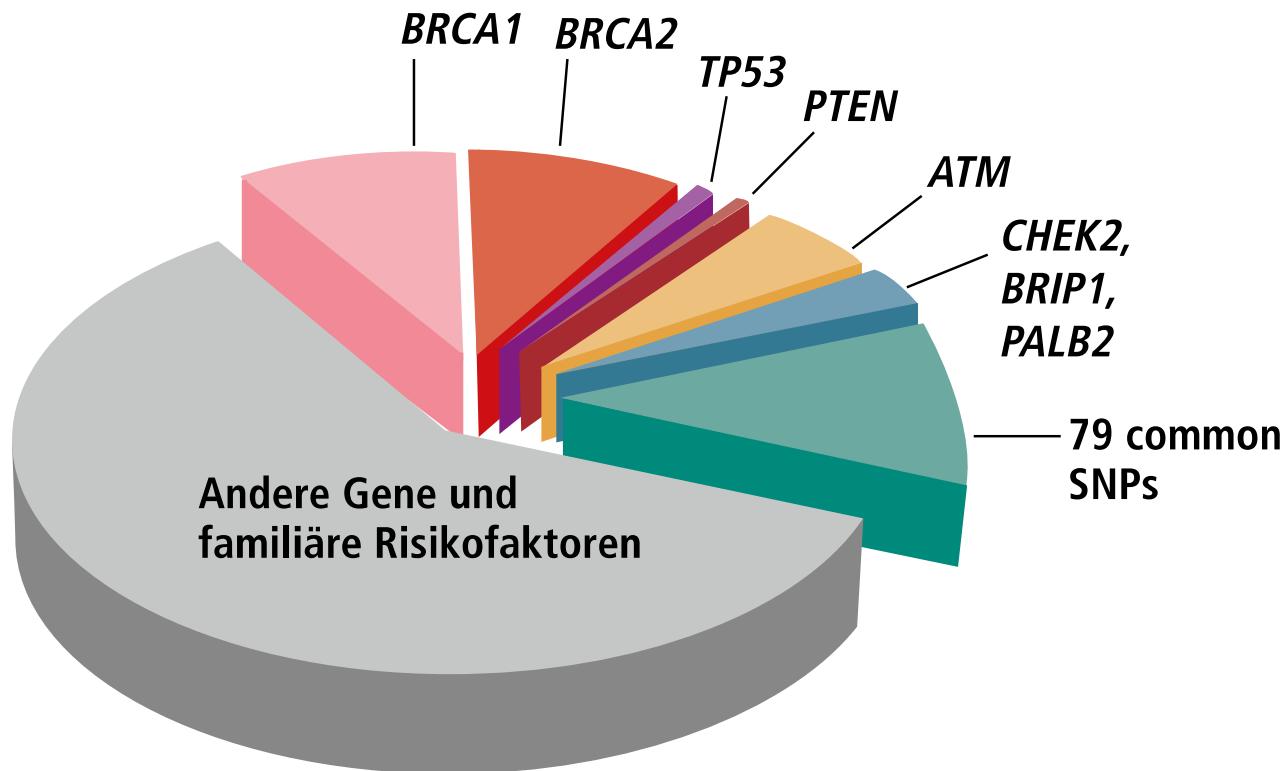

Mutation in
egg or sperm

All cells
affected in
offspring

EMBRACA Talazoparib in BRCA+ mBC

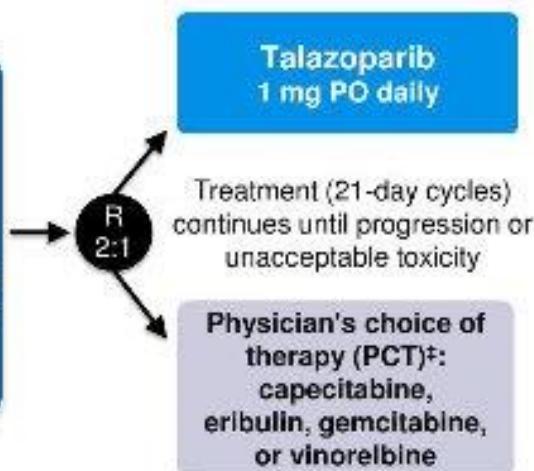

Study Design

Patients with locally advanced or metastatic HER2-negative breast cancer and a germline *BRCA1* or *BRCA2* mutation†‡

Stratification factors:

- Number of prior chemo regimens (0 or ≥ 1)
- TNBC or hormone receptor positive (HR+)
- History of CNS mets or no CNS mets

Phase 3, international, open-label study randomized
431 patients in 16 countries and 145 sites

Primary endpoint

- Progression-free survival by RECIST by blinded central review

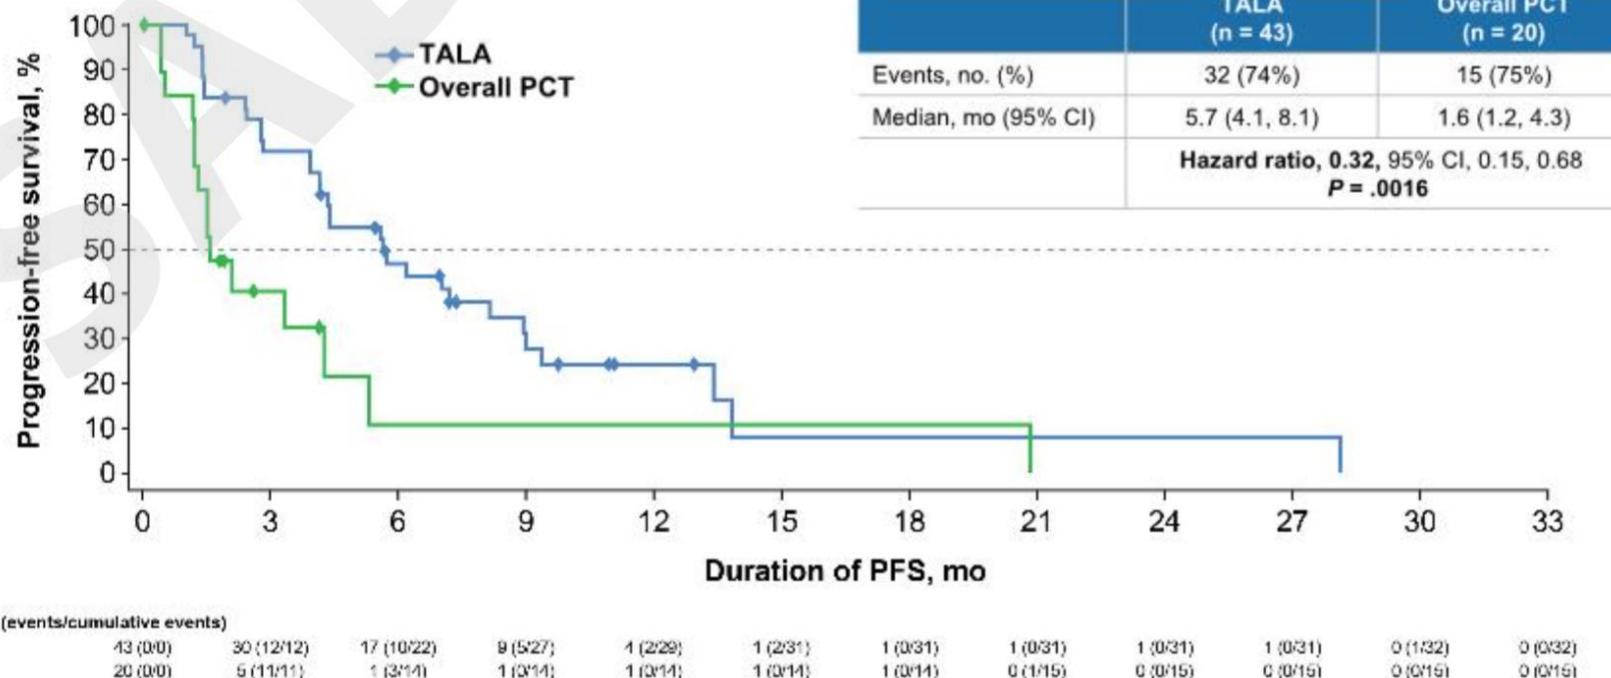

Key secondary efficacy endpoints

- Overall survival (OS)
- ORR by investigator
- Safety

Exploratory endpoints

- Duration of response (DOR) for objective responders
- Quality of life (QoL; EORTC QLQ-C30, QLQ-BR23)

EMBRACA – Primary Endpoint PFS in Patients with Brain Metastasis

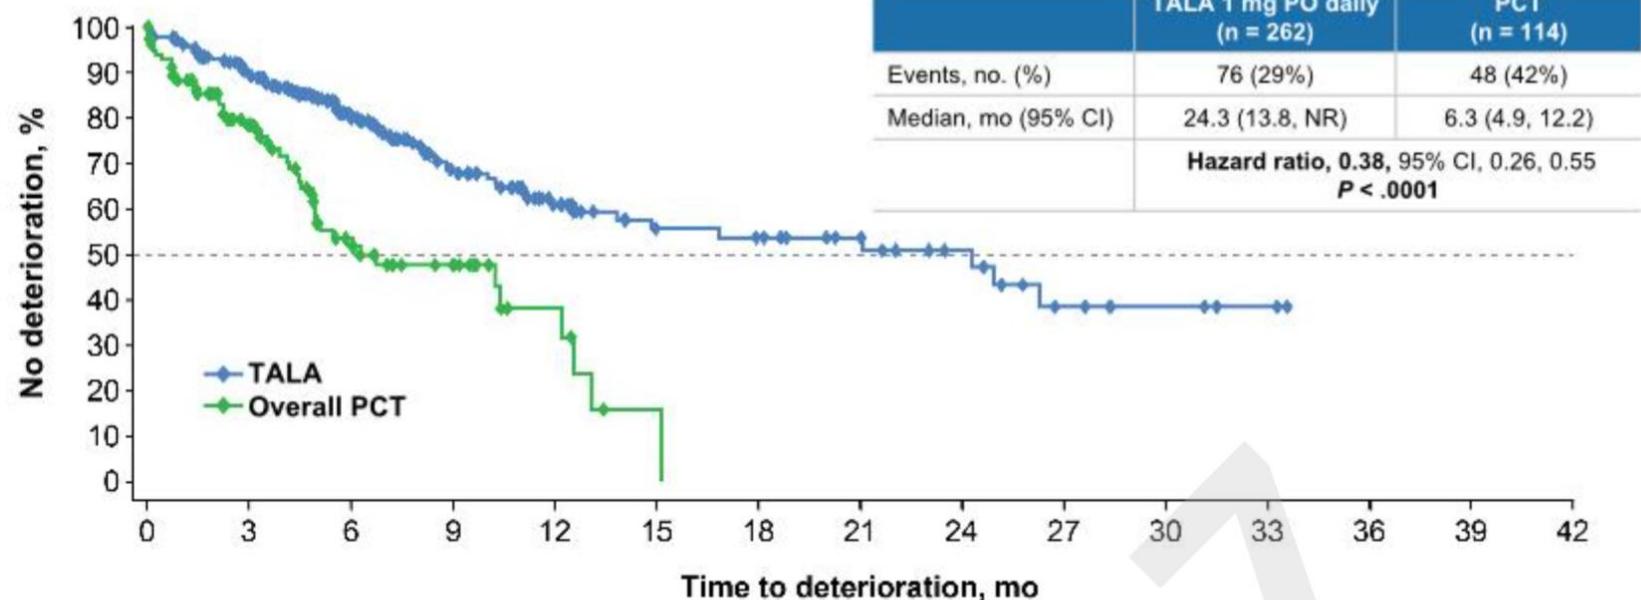

This presentation is the intellectual property of the author/presenter. Contact her at jlitton@mdanderson.org for permission to reprint and/or distribute.

EMBRACA – Quality of Life

Time to Detioriation of QoL (EORTC QLQ-C30)

Statistically significant delay in the time to clinically meaningful deterioration* in GHS/QoL favoring TALA

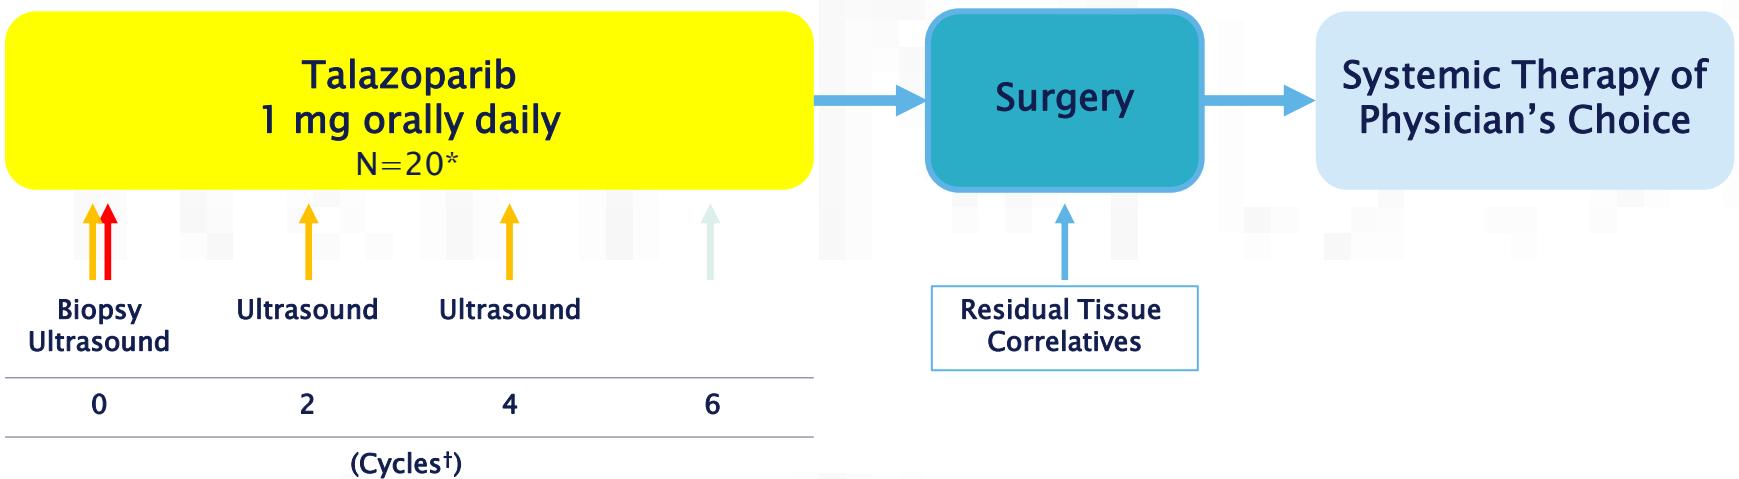

No. at risk (events/cumulative events)

	262 (0/0)	212 (26/26)	139 (18/44)	78 (17/61)	44 (7/68)	28 (3/71)	26 (1/72)	20 (0/72)	14 (1/73)	7 (3/76)	4 (0/76)	2 (0/76)	0 (0/76)	0 (0/76)	0 (0/76)
PCT	114 (0/0)	61 (22/22)	30 (17/38)	17 (3/52)	6 (2/44)	1 (3/47)	0 (1/68)	0 (0/68)	0 (0/68)	0 (0/68)	0 (0/68)	0 (0/68)	0 (0/68)	0 (0/68)	0 (0/68)

Abbreviation: NR, not reached. *≥ 10-point decrease and no subsequent observation with a < 10-point decrease from baseline.

Neoadjuvant Talazoparib for EBC with *mBRCA*

Eligibility

- Tumors > 1 cm
- Clinical Stage I–III
- *BRCA* pathogenic variant
- No previous therapy for invasive breast cancer

Exclusion

- HER2+

Primary Objectives

- pCR (ypTO/is ypNO)
- RCB-0 + RCB-I

Secondary Objective

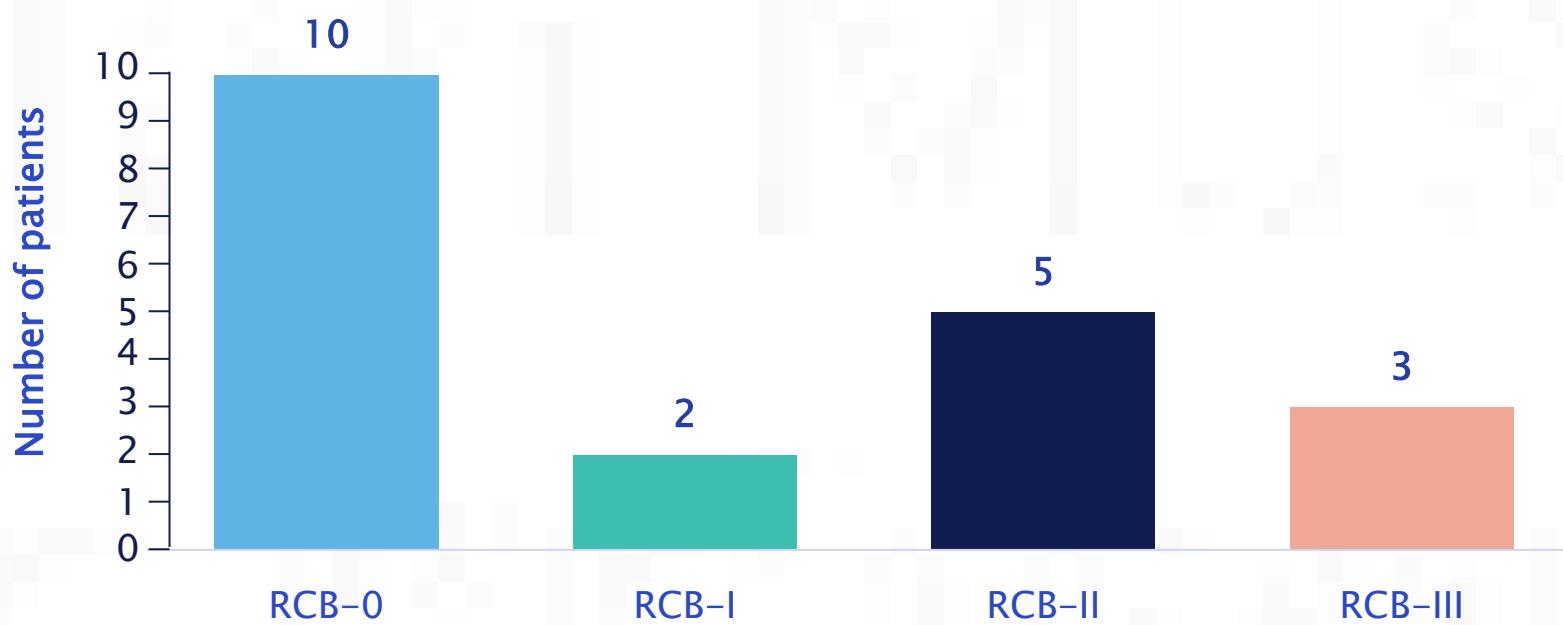

- Evaluate toxicity

*1 patient took 5 months of talazoparib and then refused biopsy and surgery and proceeded to chemotherapy.

[†]1 cycle=28 days.

BRCA=breast cancer susceptibility gene; EBC=early breast cancer; HER2=human epidermal growth factor receptor 2; pCR=pathological complete response; RCB=residual cancer burden.

Neoadjuvant Talazoparib for EBC With *BRCA* Mutation: Pathologic Results

pCR (RCB-0): $10/19=53\%$; 95% CI=32%-73%

RCB-0+I: $12/19=63\%$; 95% CI=41%-81%

pCR=pathological complete response;

Litton JK, et al. Abstract 508. ASCO 2018.

Neoadjuvant Talazoparib for EBC With *BRCA* Mutation: Hematologic Toxicities and RBC Transfusions

Toxicity	Grade 1	Grade 2	Grade 3	Grade 4
Anemia	4	3	8	-
WBC decreased	8	4	-	-
Thrombocytopenia	-	-	-	1
Neutropenia	-	4	3	-

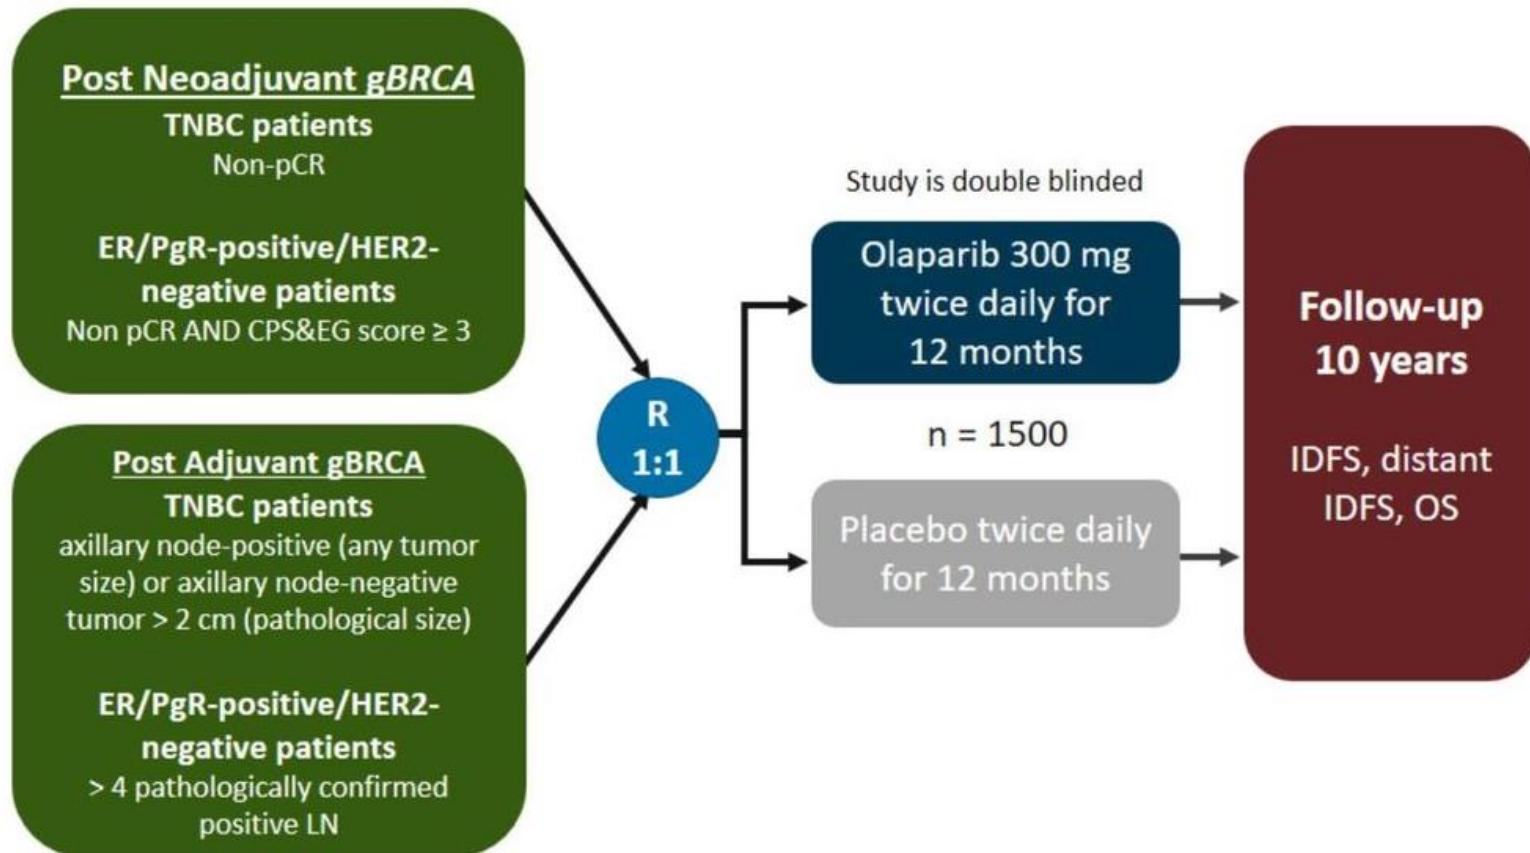

BRCA=breast cancer susceptibility gene; EBC=early breast cancer; PRBC=packed red blood cell; RBC=red blood cell; WBC=white blood cell.

Neoadjuvant Talazoparib for EBC With *BRCA* Mutation: Nonhematologic Toxicities

Toxicity	Grade 1	Grade 2	Grade 3	Grade 4
Nausea	14	1	–	–
Fatigue	14	–	–	–
Alopecia	11	–	–	–
Dizziness	6	–	–	–
Dyspnea	5	–	–	–
Hyperglycemia	5	–	–	–
Pain (in breast and other)	8	1	–	–
Increased transaminases	4	–	–	–
Mucositis	4	–	–	–
Vomiting	2	1	–	–
UTI		2	1	–
Hypomagnesemia	3	–	–	–

BRCA=breast cancer susceptibility gene; EBC=early breast cancer; UTI=urinary tract infection.

OlympiA: Phase III Study of Adjuvant Olaparib

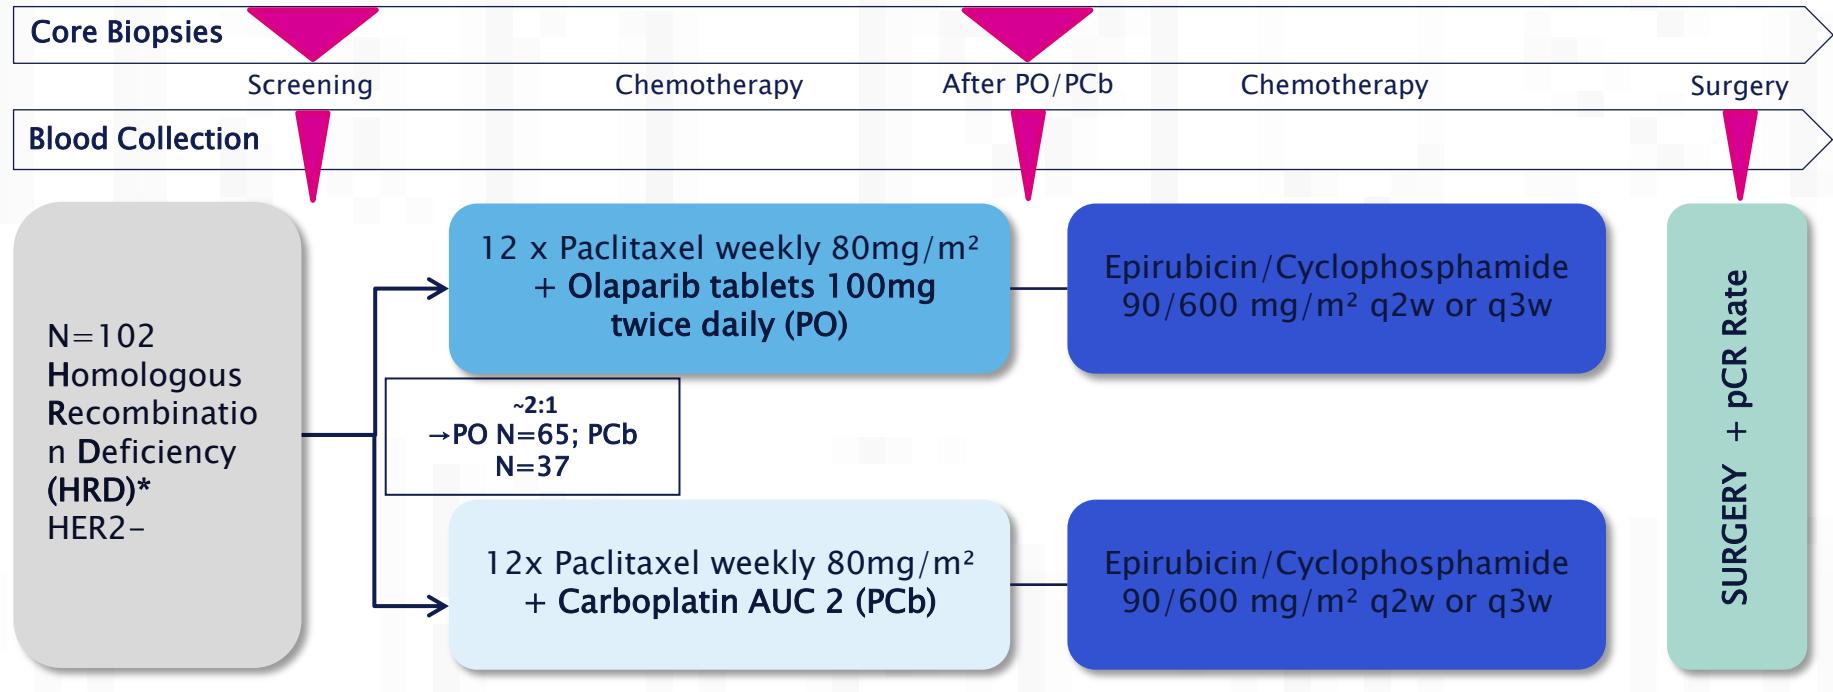

ClinicalTrials.gov. NCT02032823.

MEDIZINISCHE
UNIVERSITÄT WIEN

Christian F Singer, MD, MPH
Dept of OB/GYN, MUW

GeparOla Study Design

Stratification Factors:

- Age (<40 years vs ≥ 40 years)
- Hormone Receptor Status (HR+ vs HR-)

* Patients with either a known somatic or germline *BRCA1/2* mutation or HRD score¹ high

¹Timms et al. Breast Cancer Res 201

Objectives and Endpoints

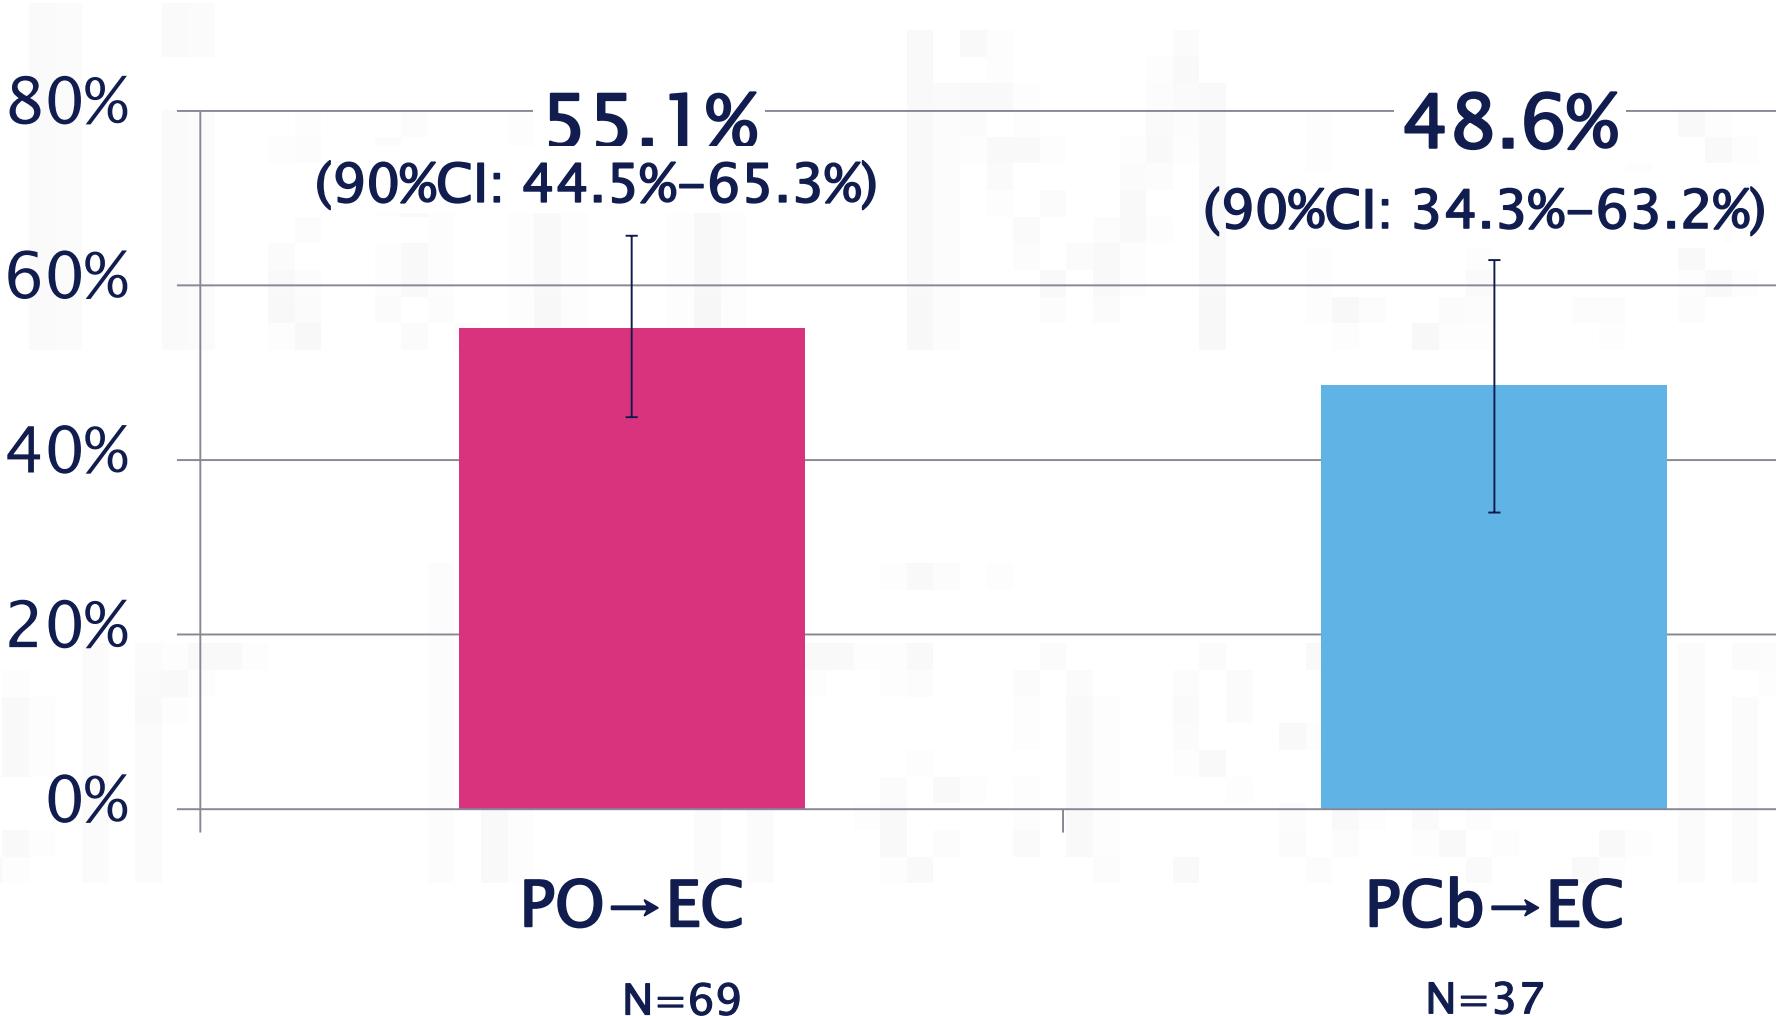

Primary Objective and Endpoint:

- To assess the pathological complete response (ypT0/is ypN0) rate of neoadjuvant treatment of olaparib and paclitaxel followed by EC (PO→EC) in patients with early BC and HR deficient tumors

Main Secondary Objectives and Endpoints:

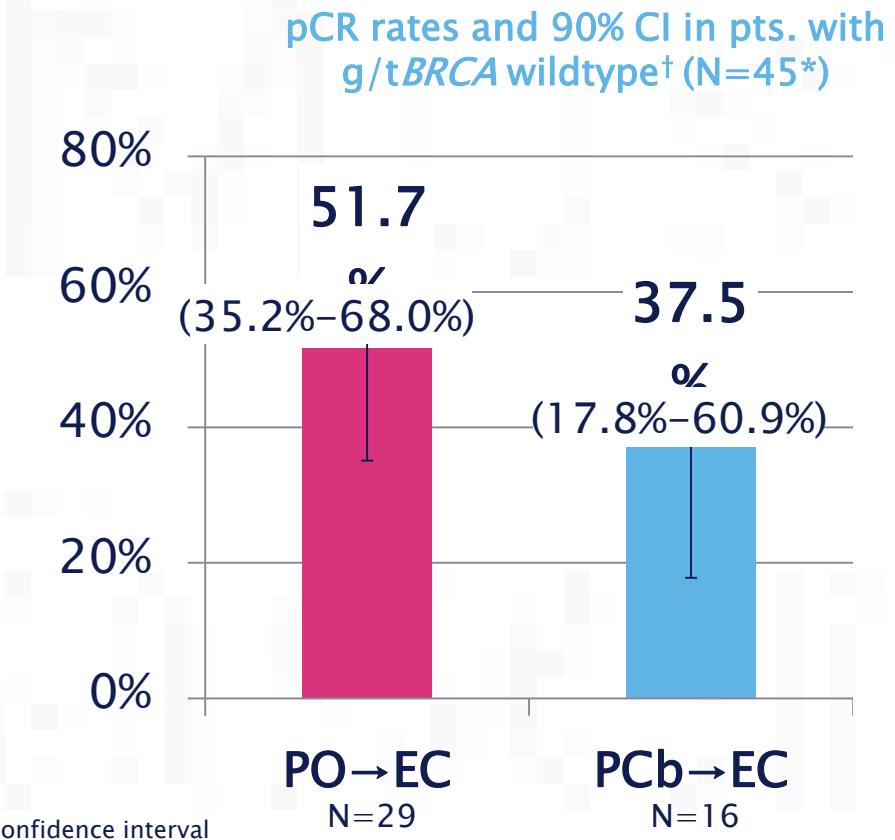

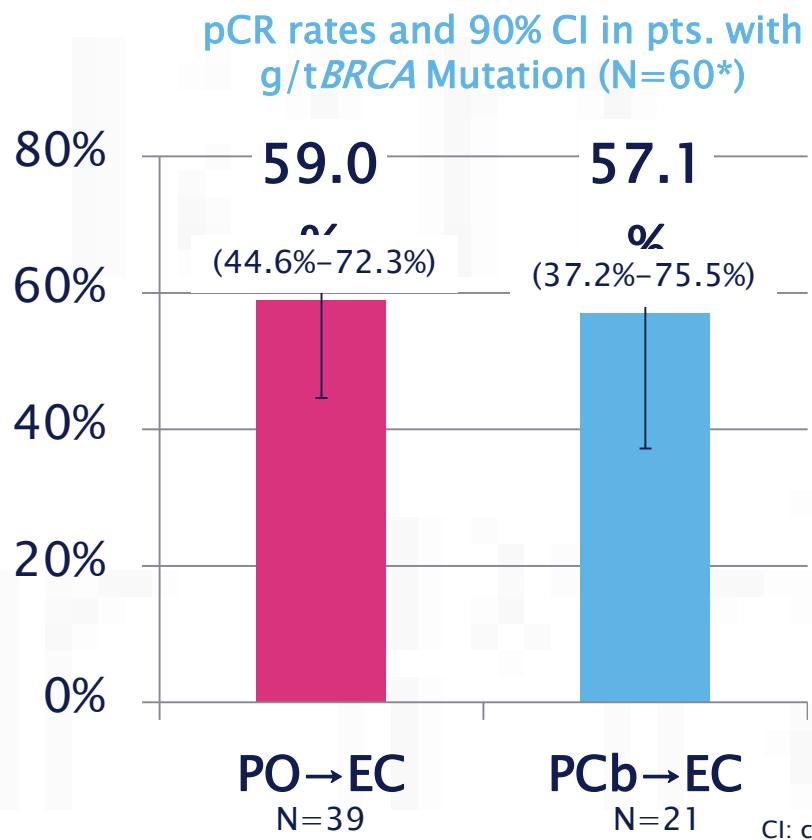

- pCR rate (ypT0/is ypN0) of patients receiving paclitaxel and carboplatin followed by EC (PCb→EC)
- pCR rate (ypT0/is ypN0) in stratified subgroups
- pCR rates according to different pCR definitions: ypT0 ypN0; ypT0 ypN0/+; ypT0/is ypN0/+; ypT_(any) ypN0
- pCR rate in HRD Score high with vs without tBRCA mutation
- Clinical response rate
- Breast conservation rate
- Toxicity and compliance
- Immune- and biomarker

Primary Endpoint – pCR ypT0/is ypN0

Predefined Subgroup Analysis (ypT0/is ypN0)

BRCA Mutation

*One patient without t*BRCA* result due to insufficient quantity of DNA—HRD Score high
† HRD Score high

Serious Adverse Events

	PO→EC N=69	PCb→EC N=37
Total No of SAEs	11	37
Pts with at least 1 SAE	9 (13.0%)	19 (51.3%)
01. Infections and infestations	4	2
03. Blood and lymphatic system disorders	3	25
04. Immune system disorders	0	1
06. Metabolism and nutrition disorders	0	1
08. Nervous system disorders	0	1
14. Gastrointestinal disorders	2	3
15. Hepatobiliary disorders	1	1
22. General disorders	1	2
24. Injury, poisoning and procedural complications	0	1

- No fatal SAEs or SUSARs occurred

ABRAZO Study: Talazoparib in *gBRCA1/2* Mutation–Positive MBC

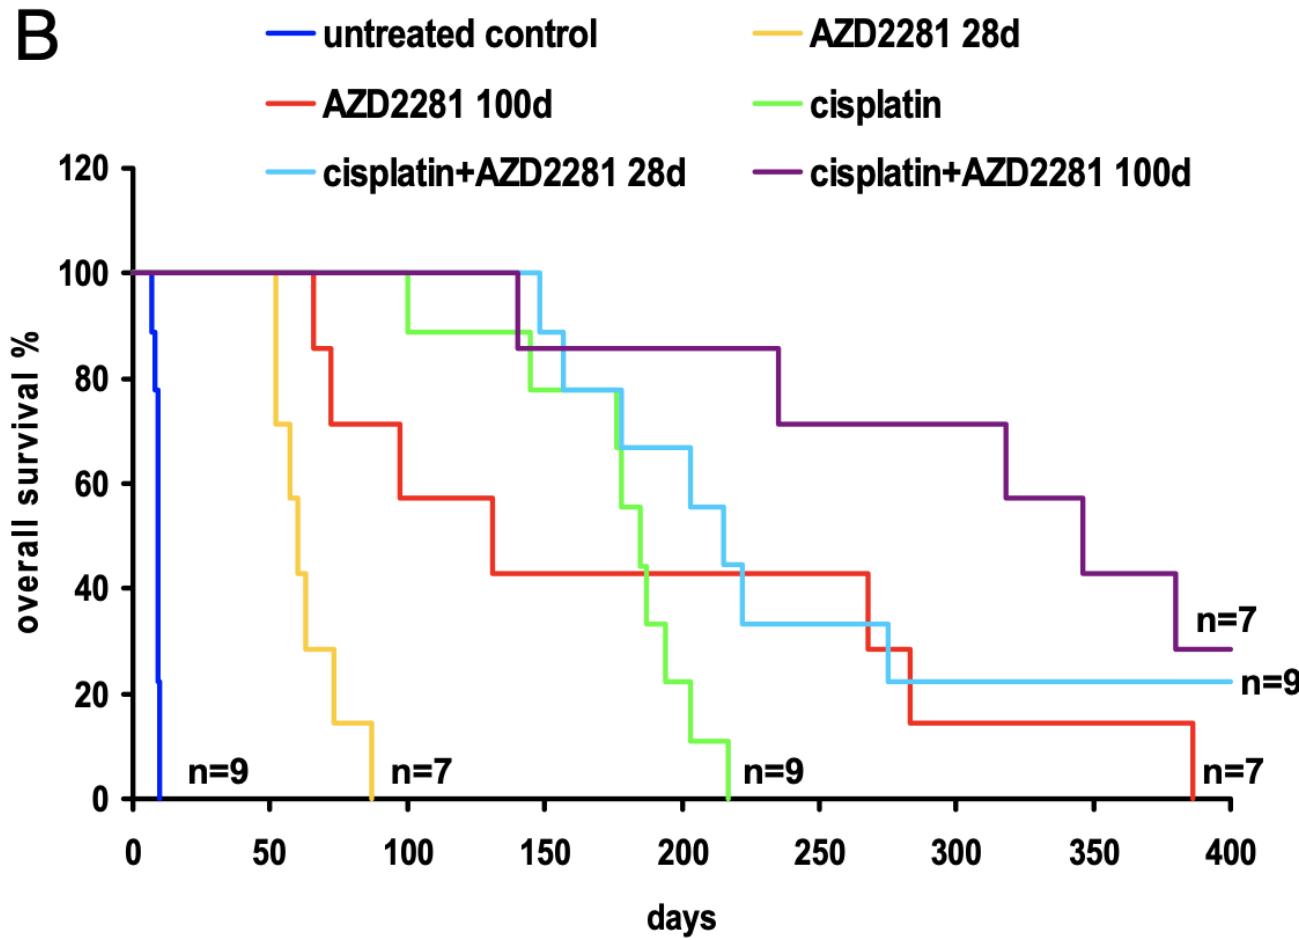

A 2-stage, phase II study of talazoparib (1.0 mg/day) in pts with *gBRCA1/2* mutation–positive MBC and ECOG PS 0-1; primary endpoint: ORR

- Cohort 1: Response to platinum-based therapy, PD > 8 wks after last dose (n = 48)
- Cohort 2: ≥ 3 cytotoxic regimens (n = 35); no prior platinum for metastatic disease

Response, n (%)	Cohort 1 (n = 48)	Cohort 2 (n = 35)	Total (N = 83)
ORR, % (95% CI)	21 (10-35)	37 (22-55)	28 (18-39)
Best response			
▪ CR	2 (4)	0	2 (2)
▪ PR	8 (17)	13 (37)	21 (25)
▪ SD	18 (38)	18 (51)	36 (43)
▪ PD	18 (38)	4 (11)	22 (27)
